

CLAMPING FORCE MONITORING

Digitalisation must take simple things off people's hands and support them in complex processes. Mapping the clamping force during milling is an interesting example of this.

Monitoring the clamping force at the workpiece allows you to...

- ✓ Safely clamp workpieces by monitoring the correct clamping force
- ✓ Analyse milling processes and optimise cutting values
- ✓ Immediately recognise fluctuations or drops in clamping force

Monitor each Sense product - up to 8 devices simultaneously!

TRANSFER TO DEVICES

In addition to showing the clamping force directly on the display on the device, the data can also be displayed via Bluetooth (low energy) on a PC, HMI (web browser) and mobile phone:

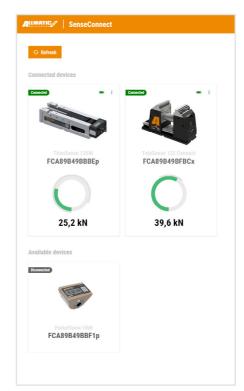

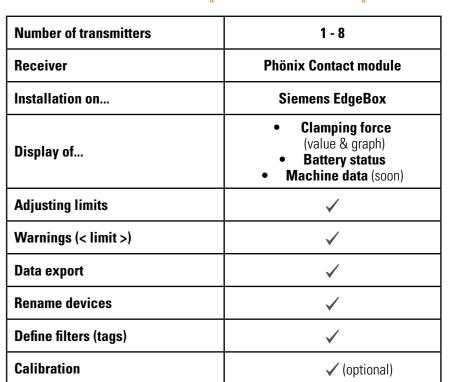

SENSE PRODUCT OVERVIEW

THE FLEXIBLE

TeleSense 125 Connect

- Ideal contour for 5-axis machining
- With integrated clamping force monitoring directly on display and wireless to end device.
- High clamping force of 40 kN at 50 Nm tightening torque due to spindle with force amplifier
- Jaw width 125 mm
- Clamping range 0-199 mm; with extension up to 672 mm
- Universal quick change jaw
- Compatible to the movable jaws of CentroGripp, T-Rex, NC8 and Titan 2
- Adjustable with only one tool
- Pull down possible

THE POWERFUL

TitanSense

- Integrated clamping force monitoring. Monitor clamping force while machining
- Process-reliable clamping with high repeatability
- Horizontal and vertical installation Ideal for 3- and 4-axis machines
- Clamping of raw and pre-machined parts (parallel, round and irregular parts) also with gripp and pull-down clamping

THE MUST HAVE

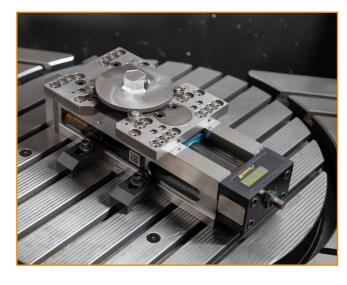

PocketSense

- Load cell for reliable, wireless checking of clamping forces
- Perfect for regular maintanance of vices
- Suitable for alle vices with a minimum clamping range of 61mm and pressure forces of up to 70 kN

SENSE PRODUCTS IN ACTION

TELESENSE 125

Optimal for 5-axis machining

with integrated clamping force monitoring

TeleSense 125 Connect

TeleSense 125

TeleSense 125 Compact

Scope of supply

- 1x TeleSense without jaws
- 1x Handcrank SW10
- 1x Torx T10
- 1x Battery AA 3,6 V (with Connect)
- Quick-Start-Guide

Technical Information

Range of use:

- With integrated clamping force monitoring directly on display and wireless to end device
- High clamping force of 40 kN at 50 Nm tightening torque due to spindle with force amplifier
- Jaw width 125 mm
- Clamping range 0-199 mm

Product features:

 Clamping of raw and pre-machined parts (parallel, round and irregular parts) also with gripp and pull-down clamping. Reliable clamping without pre-stamping

Maximum flexibility:

- Universal quick change jaw for a variety of different setups thus reducing setup time and less force is required
- Compatible to the movable jaws of CentroGripp, T-Rex, NC8 and Titan 2 (adapter available)
- Extension element for enlarging clamping width

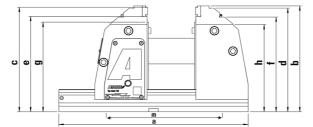

Simple handling:

- Moving of both jaw supports, fixing one jaw side
- Only one tool due to uniform wrench size 10 mm (WS10) and identical torque for force adjustment and locking
- 4 threads for workpiece stop (M8)

Simple use of the clamping force monitoring

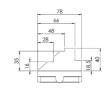

- Long battery life
- Easy & guick battery change with standard batteries
- Display robust and splash water protected
- Monitoring unit can also be retrofitted
- Standard with locating holes \emptyset 25H6 M10 for zero-point clamping systems; inside micrometre 200 mm \pm 0,01 mm

ACCESSORIES

100 80 38 38 M6 FB

Universal quick change jaw 125

Art.No.: 6921864001031

- Clamping of raw and pre-machined parts (parallel, round and irregular parts) including gripp and pull-down clamping
- Quick change system for rapid change of jaws
- Maximum flexibility for a variety of different setups

Product features:

- Material: hardened steel
- Functions as step jaw for clamping pre-machined workpieces
- Functions as mould jaw for round parts
- Grip strip can be screwed on
- Use of all gripp-studs of the Titan 2-series possible (except gripp-stud round h5,5)
- Gripp-strip can be attached for clamipng close to the edge for materials up to 1.000 N/mm²
- Reliable clamping without pre-stamping

Jaw adapter for CentroGripp/T-Rex

Art.No.: 6921861071031

- Mobile jaws of CentroGripp/T-Rex compatible
- Quick change system for mounting the adapter on the jaw support

Jaw adapter for NC8/TITAN 2

Art.No.: 6921861070031

- Mobile jaws of NC8 125/Titan 2 125 compatible NC8 125/Titan 2 1
- Quick change system for mounting the adapter on the jaw support

Support jaw movable

Art.No.: 6921734072942

- For mounting various pull-down wedge elements, universal gripper set and gripp-studs
- Reliable clamping without pre-stamping

Jaws - Compatibility

When using the corresponding adapters, the mobile jaws of the following product series can be used:

- + CentroGripp und T-Rex with adapter 6921861071031
- + NC8 und TITAN 2 with adapter 6921861070031

^{*} Can be retrofitted on request

ACCESSORIES

Pull-down parallels h170 / h148 (Pair)

Art.No.: 6921865005131 / 6921865015131

- For levelling the workpiece on the universal quick change jaw
- Can be screwed to the jaw support
- Pull-down parallels h148 (TeleSense 125 Compact)

Hand Crank WS10

Art.No.: 6921865508131

- Uniform key width 10 mm for pre-adjustment and locking
- Please use a torque wrench for clamping

Parallels h144 / h122 (Pair)

Art.No.: 692186500503

step 4 mm

- For supporting the workpiece
- Can be screwed to the jaw support
- For parallel raising of workpieces
- Parallels h122 (TeleSense 125 Compact)

Gripp strip 125 reversible

• Gripp-strip with fine & rough teeths

of up to approx. 1000 N/mm²

Smooth strip 125 carbide coated

 Grip strip reversible and smooth strip for mounting on the Universal quick-change jaw 125

For clamping unmachined parts close to the edge,

• Gripper studs suitable for materials with a strength

Art.No.: 6921864010031 Art.No.: 6921864010131

Side clamps (pair)

Art.No.: 6921865000031

- For securing the vice on the machine table
- We recommend the use of 6 side clamps per vice

Hexagonal socket 10-3/8 inch

Art.No.: 0651130411610

Hexagonal socket 10-1/2 inch

Art.No.: 0651130411710

10

TITANSENSE

TitanSense 125 M

TitanSense 125 L

TitanSense 160

Range of use:

- Integrated clamping force monitoring. Monitor clamping force while machining
- Process-reliable clamping with high repeatability
- Horizontal and vertical installation Ideal for 3- and 4-axis
- Clamping of raw and pre-machined parts (parallel, round and irregular parts) also with gripp and pull-down clamping

Product features:

Maximum safety:

- Monitoring of the clamping force during clamping and machining due to integrated, electronic measuring system.
 - Readout directly on display and via wireless transmission to terminal device (via Bluetooth BLE)
- Encapsulated spindle with force amplifier (IP65). Input of max. 30 Nm for 40 kN clamping force
- Operation via torque wrench

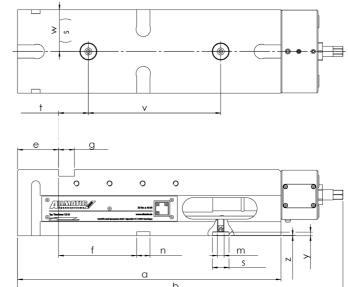

Flexible use:

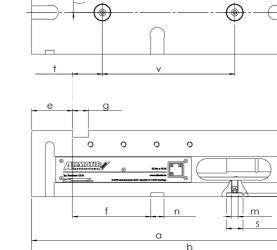

- All jaws of the Titan2/NC8 series can be used
- Unmachined parts in highly varied materials or with complex geometries, can be
 - Different gripp-studs for materials up to approx. 1400 N/mm² strength
- Quick change for attachment jaws and parallels
- Titan2 spindle can also be used without monitoring
- Holes for workpiece stop, angular drive and extension
- Sides are ground
- Bottom side with alignment grooves and locating holes Ø 25H6 M10 for zero-point clamping systems, inside micometre 200 mm ± 0,01 mm

Simple use of the clamping force monitoring:

- Clamping force can be recorded with all compatible jaws, as the measuring unit is in the spindle
- Transmission range up to 20 m
- Long battery life
- Easy & quick battery change with standard batteries
- Display robust and splash-proof
- Operating temperature between 10° C and 40° C
- Individual QR code for fast access to technical information, accessories, spare parts and service

POCKETSENSE

Range of use:

- Load cell for reliable, wireless checking of clamping forces
- Perfect for regular maintanance of vices
- Suitable for alle vices with a minimum clamping range of 61 mm and pressure forces of up to 70 kN

Product features:

- Clamping force indication directly on display and other devics
- Energy-efficient due to standby mode and battery life up to six months in two-shift operation
- Compact contour
- Aluminium alloy casing
- Important: The whole surface of the measuring disc must be clamped in the vice

Integration of measurement technology into other products

The technology behind a monitored vice and load cell can also be adapted to many other areas.

For example, it can also be installed directly in clamping jaws or even used as shims.

Compressive forces of the most varied types can be checked with a very high degree of accuracy via the measuring discs.

The discs - comparably small as a 1€ coin - are available in three different versions: M12 (5t), M16 (10t) and M20 (20t). Measurements are possible at an operating temperature of -20 to +70 °C, and the body is also very robust and waterproof.

Test customer: Mayer Feintechnik GmbH
Test product: TeleSense 125 Connect
Machine: DMU 60dVo Bi. 2022

Work piece: Rectangular and round semi-finished products

High-quality, sophisticated 5-axis vice

"We had the vice in our house for about 4 weeks. All employees who were involved in the test are convinced by the product in terms of quality, flexibility and precision. I would recommend the 5-axis vice without reservation. It is a very high quality product, with which our clamping tasks for 5-axis machining can be realised in a very short time. The accessories are extensively designed and the mounting options are absolutely future-proof"

Frank Neuschulz, Managing Director of Mayer Feintechnik GmbH

Test customer: Zeiler GmbH

Test product: TeleSense 125 Connect

Machine: DMU 70

Work piece: Steel, aluminium, plastic and cast parts

Maximum flexibility and process reliability

"We had the new TeleSense 125 Connect 5-axis vice in use on our DMU 70 for several weeks. We clamped different workpieces made of steel, aluminium, plastic or cast iron on it and also tested the pull-down

In terms of handling, accessibility and vibration behaviour, we were always very satisfied.

We see a great advantage for our production in the clamping force monitoring. Thanks to the display, we always have the clamping force in view and can react quickly to fluctuations.

In addition, we can dose the force very finely, which is especially important when machining different materials. The TeleSense vice has convinced us throughout that we now use it permanently in our production."

Benno Zeiler, Managing Director Zeiler GmbH
